

Plant efficiency through affordable real-time tracking systems

A new indoor tracking solution for manufacturers combining positioning accuracy, long working autonomy and beacons compatible with any kind of assets.

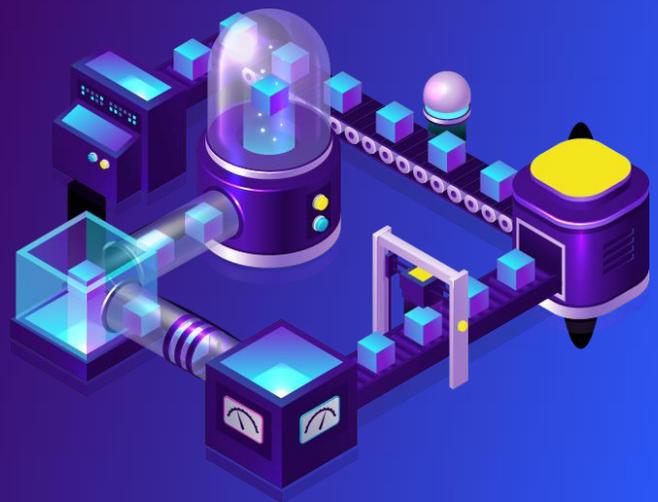

TrackInWare project aims at developing and commercializing a new indoor tracking solution, which provides a real-time and precise positioning with energy efficiency. It offers a whole package of solutions at reasonable cost.

Challenges to tackle:

- Lack of accuracy of existing tracking systems
- High energy consumption of the beacons and gateways
- Weakness of the functionalities of the software
- High cost of the whole solution

Benefits of TrackInWare solution:

- Real-time and accurate positioning
- High energy efficiency
- Compatible with various size of assets
- Low cost
- Increase productivity
- Improve quality of operations
